// ArmaFlex 520 Adhesive

Specially formulated for the uniform and safe seam bonding of ArmaFlex insulation materials, ArmaFlex 520 is a quick-drying contact adhesive for the joining of seams and butt joints in elastomeric pipe and sheet insulation. It is low viscosity for ease of use. When applied to clean prepared surfaces, and fully cured, it maintains high-resistance to water vapour.

// ArmaFlex 520 BLV Adhesive

ArmaFlex 520 BLV is a low-VOC contact adhesive developed to meet application requirements for reduced emissions of Volatile Organic Compounds. It meets Air Pollution Control (Volatile Organic Compounds) Regulation from Environmental Protection Department in Hong Kong.

// ArmaFlex HT625 Adhesive

ArmaFlex HT625 is a one-component adhesive which has been developed to bond ArmaFlex insulation applied on high temperature lines. Especially well matched with HT/ArmaFlex, it ensures a homogeneous and safe bonding at joints and seams.

// ArmaFlex Tape Self-Adhesive

This is a self-adhesive tape used to fill gaps, insulate awkward shapes and difficult-to-reach areas. ArmaFlex insulation tape is supplied in rolls of 3mm thick insulation at a width of 50mm.

// ArmaFinish 99 Paint

ArmaFinish 99 is a water-based coating using an advanced terpolymer resin system. When properly applied the coating is suitable for the protection of ArmaFlex flexible thermal insulation materials against sunlight, UV radiation and chemical attack. The coating, when fully cured, maintains the flexibility, resistance to water vapour and fire performance of the ArmaFlex material. Where resistance to damage is a particular requirement the coating may be further strengthened using a mesh glass fibre scrim.

// ArmaFlex Cleaner

This is a colourless volatile liquid cleaner used for the removal of grease, oils and dirt from surfaces prior to the use of ArmaFlex adhesives or ArmaFinish 99 paint. The cleaner may also be used to clean ArmaFlex adhesive off brushes and tools.

// ArmaFlex Gluemaster

The "Gluemaster gun" is an excellent tool that greatly speeds the application of adhesive and minimises any mess from the over-application that normally occurs with brushes. This tool is comprised of a small storage reservoir, a trigger to deliver the glue, and a circle of bristles fitted around the delivery nozzle. Spare bristles are available in two different sizes.

// ArmaFlex Knife Set

Completing the comprehensive range of ArmaFlex accessories, Armacell also offers a set of professional cutting knives together with a sharpening stone and plastic tube for safe storage. This will help installers cut the ArmaFlex tubes and sheets cleanly for making high-quality joins.

All data and technical information are based on results achieved under typical application conditions. Recipients of this information should, in their own interest and responsibility, clarify with us in due time whether or not the data and information apply to the intended application area. Installation instructions are available in our ArmaFlex installation manual. Please consult our Customer Service Center before insulating stainless steels. 520 Adhesive must be used to guarantee proper installation. For some refrigerants the discharge temperature may exceed +105 °C, consult our Customer Service Center for further information. For outside use, NH/ArmaFlex should be protected within 3 days, e. g. with Armafinish.
