Configuration of insulation with Armacell plug-in

- ✓ The configuration process uses the functions and capabilities of Revit.
- ✓ With Armacell's plug-in the designer selects :
 - the type of system in which they will add insulations
 - the material of the pipes from which the system will be made
 - minimum insulation thicknesses for the selected range of pipe diameters
- ✓ For each range of pipe diameters the designer defines the number of layers and Armaflex insulation material.
- ✓ The configuration created by the designer can be used in subsequent projects. The export/import of configurations is possible.

New Armacell plug-in

- ✓ The plug-in will be available for downloading from armacell home page and Autodesk store.
- ✓ It works with Windows 7, Windows 10 and Revit 2017, 2018, 2019, 2020, 2021
- ✓ The software uses local languages (DE, EE, FR, PT, IT, NL, SE, NO, DK, FIN, PL, CZ, HU, RO, RU, SL, HR, SRB)
- ✓ Plug-in can be updated online, when a new version is available.

Armacell plug-in main Tools

Armacell plug-in tools are displayed in the Add-Ins tab

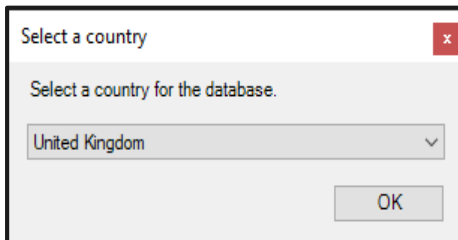

- *Configuration* - allows creating your options for adding insulation to pipelines and ducts from System type with defined parameters
- *Update* - Update of already designed pipes and ducts (with or without insulation)
- *Info* - displays information about assigned insulation for the selected object
- *BOM (Bill of materials)* - Creates a bill of insulation materials in the form of a table
- *Help* - plug-in version info, and updates,

Armacell plug-in Tool - Configuration

Start the work with the plug-in by setting the product parameters for insulating pipes/ducts

- Press the configuration button 
- Select the Region to load the relevant database, and the language (it is assigned depending on the previous selection of the region)

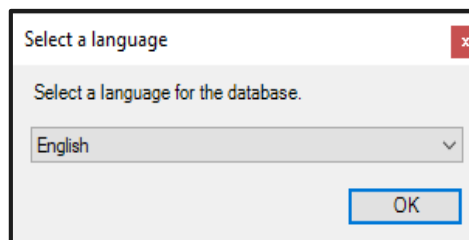

Select a country

Select a country for the database.

United Kingdom

OK

Select a language

Select a language for the database.

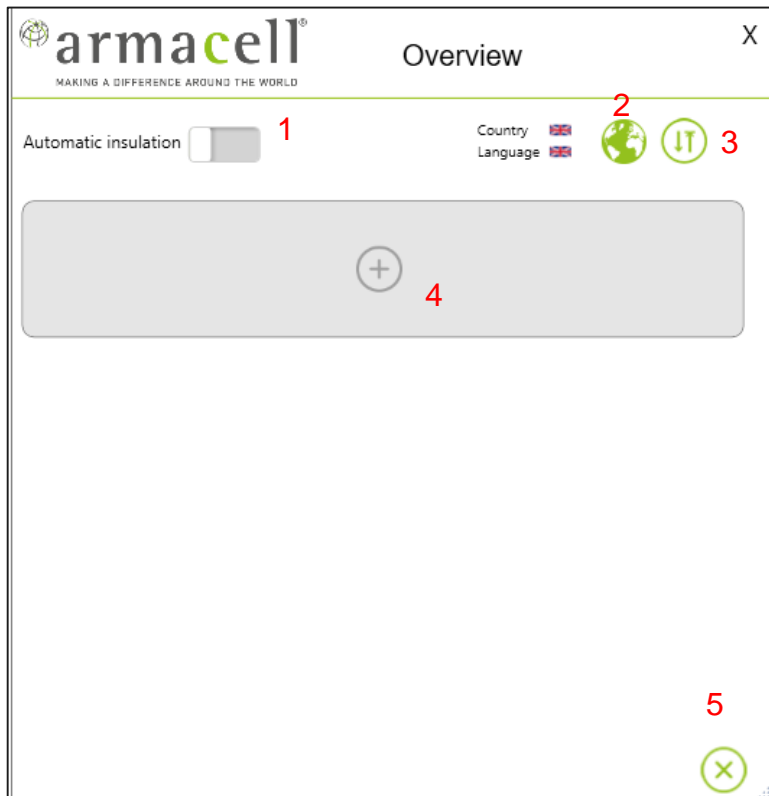

English

OK

Armacell plug-in Tool - Configuration

The proper configurator window opens :

Functions of the Buttons

1. Enable to turn on automatic addition of insulation to the model
2. Change of the country and language
3. Import/Export of saved configuration
4. Add a new configuration
5. Save configuration

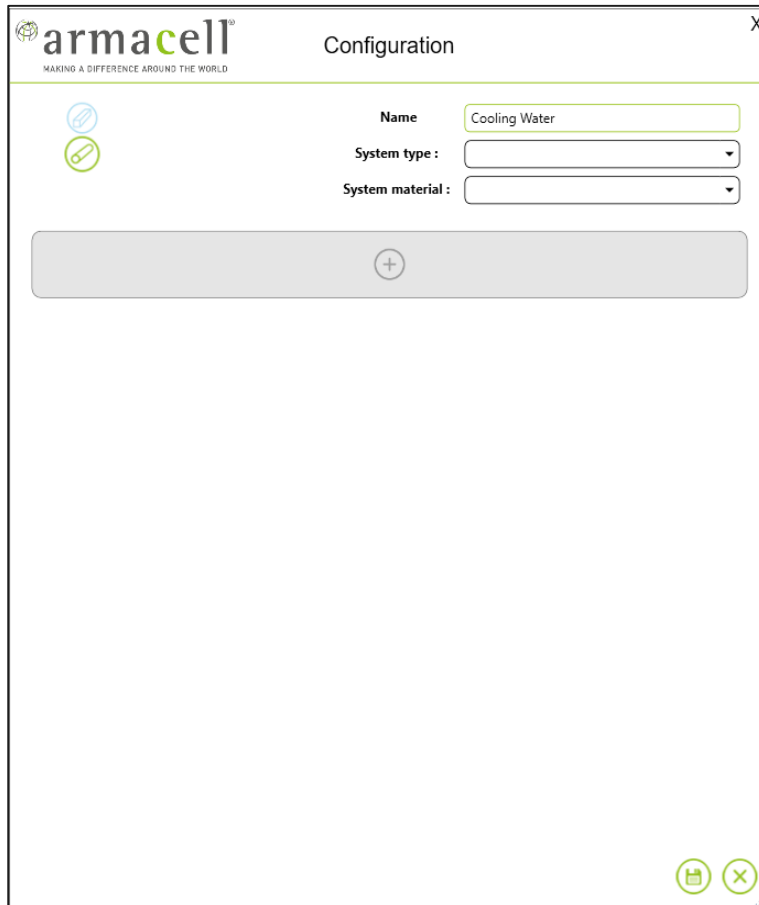

Armacell plug-in Tool - Configuration

Turn on the Automatic Insulation button

- Now you can start the process of adding a new configuration by pressing the button “Plus”

Armacell plug-in Tool - Configuration

The screenshot shows the 'Configuration' window of the Armacell plug-in tool. The window title is 'Configuration' and it features the Armacell logo with the tagline 'MAKING A DIFFERENCE AROUND THE WORLD'. On the left side, there are two circular icons: a blue one with a pencil and a green one with a pencil. The main area contains three input fields: 'Name' with the text 'Cooling Water', 'System type' with a dropdown arrow, and 'System material' with a dropdown arrow. Below these fields is a large grey button with a plus sign. At the bottom right corner, there are two small circular icons: a green one with a document and a green one with an 'X'.

If you work with pipes green icon for pipes should be highlighted

if you work with ducts blue icon for ducts should be highlighted

- Now you can enter a new configuration name in the configurator window
- *Example „Cooling Water“*

Armacell plug-in Tool - Configuration

armacell[®]
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material:

- Domestic Cold Water
- Domestic Hot Water
- Fire Protection Dry
- Fire Protection Other
- Fire Protection Pre-Action
- Fire Protection Wet
- Hydronic Return
- Hydronic Supply**
- Sanitary
- Vent

- Next, select the pipe System type to which the insulation will be added. The selection should be made from a list of systems read from the Revit project.
- *Example : Hydronic Supply*
- If you have previously selected the „Duct" option, the program will display duct's systems instead of pipe systems.

Armacell plug-in Tool - Configuration

armacell[®]
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material:

- Copper - A
- Copper - B
- Copper - C
- Copper - D
- Iron, Ductile - 22
- Iron, Ductile - 30
- Polyvinyl Chloride, Rigid - Schedule 40
- Polyvinyl Chloride, Rigid - Schedule 80
- Stainless Steel - 10S
- Stainless Steel - 5S
- Steel, Carbon - Schedule 40
- Steel, Carbon - Schedule 80

- In the second drop down, select the material of the pipes to be insulated. They are directly used in specific *pipe types*. *The list of pipe material is read from the Revit project*
- *Example Copper A*
- If you have previously selected the „Duct" option you do not select Material.

Armacell plug-in Tool - Configuration

armacell[®]
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material: Copper - A

+

🗑️ ✕

- Now you can start adding ranges of diameters, for which specific types of insulation will be assigned, by pressing „Plus” button

Armacell plug-in Tool - Configuration

armacell
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material: Copper - A

Minimum outer diameter(mm): 15

Maximum outer diameter(mm): 32

Minimum insulation Thickness(mm): 13

Layers: +

- In subsequent windows, specify the minimum and maximum external diameter for your pipe Range and the minimum insulation thickness that will be added to the pipes from your Range.
- Example minimum OD 15 mm, max. OD 32 mm, insulation thickness 13 mm.
- When configuring the insulation for the duct, do not enter the diameter values (leave the number 0 in the windows) The entire selected ventilation system will be insulated with one thickness.

- Now you can start defining the insulation for your range of diameters by pressing the (+) button

Armacell plug-in Tool - Configuration

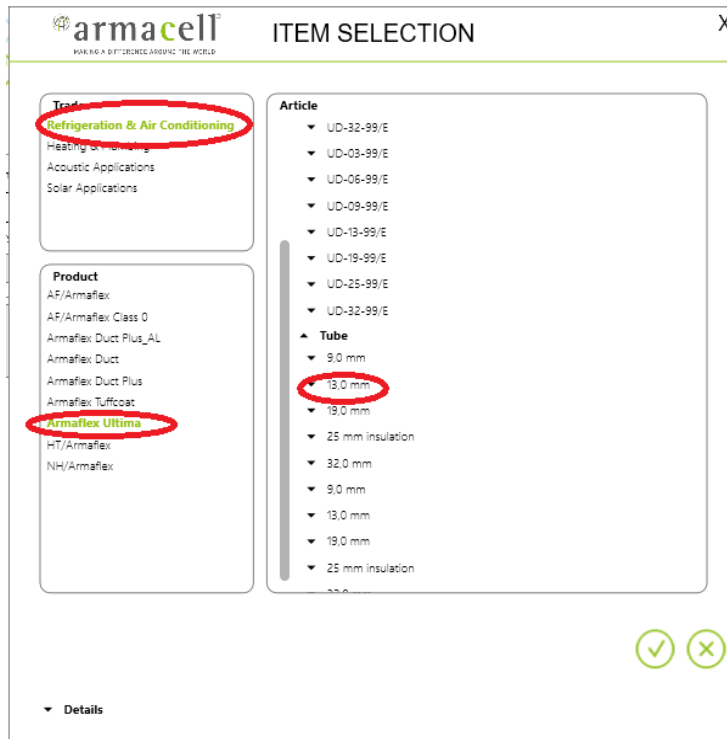

You have two options when defining insulation layers for your Pipe dimensions

- **Option 1** The required insulation thickness can be provided by **one layer** of tube or sheet
- **Option 2.** The required insulation thickness is higher than our maximum one layer and has to be provided by **multilayers** of tube or sheets

Armacell plug-in Tool - Configuration

- Defining insulation products for the Layer

You have to select the correct application, product and article:

Trade: e.g. Refrigeration, air-conditioning and ventilation

Product: e.g. Armaflex Ultima

Article : e.g. Tube 13mm

- Save the changes by pressing button 

Armacell plug-in Tool - Configuration

- **Option 1** The required insulation thickness can be provided by **one layer** of tube or sheet:

armacell[®]
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material: Copper - A

Minimum outer diameter(mm)	Maximum outer diameter(mm)	Minimum insulation Thickness(mm)
15	32	13

Layers

Material	Thickness	Type
Armaflex Ultima	13,0 mm	Tube

Save (floppy disk icon) Cancel (X icon)

- After selecting the article for the Layer the configuration window for Range OD 15-32 mm will look like the one on the left side

Save the configuration for your Range by pressing button „Save”

Cancel the configuration for your Range by pressing button “Cancel”

Armacell plug-in Tool - Configuration

- **Option 2.** The required insulation thickness is higher than Armaflex maximum one and has to be provided by multilayers of tube or sheets

armacell[®]
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material: Copper - A

Minimum outer diameter(mm)	Maximum outer diameter(mm)	Minimum insulation Thickness(mm)
100	125	40

Layers

Material	Code	Type
Armaflex Ultima	UD-19-99/E	Sheet

+ (Add Layer button)

✓ Add and **define the 1-st layer** in the way described in Option 1

✓ than you add and define the second layer by pressing the button + “Add Layer”

Armacell plug-in Tool - Configuration

- **Option 2.** The required insulation thickness is higher than our maximum one and has to be provided by multilayers of tube or sheets

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material: Copper - A

Minimum outer diameter(mm)	Maximum outer diameter(mm)	Minimum insulation Thickness(mm)
100	125	40

Layers

Material	Article	Type
Armaflex Ultima	UD-19-99/E	Sheet
Armaflex Ultima	UD-25-99/E	Sheet

- When defining the second Layer select the correct article. The total thickness of first and second layer has to be bigger than “set minimum insulation thickness” in our example 40 mm). For bigger thickness you may need more layers.
- Save the configuration of your range by pressing button “Save”
- Cancel the configuration of your range by pressing button „Cancel”

Armacell plug-in Tool - Configuration

armacell
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name:

System type:

System material:

Minimum outer diameter(mm)	Maximum outer diameter(mm)	Minimum insulation Thickness(mm)	
<input type="text" value="100"/>	<input type="text" value="125"/>	<input type="text" value="40"/>	
Layers			
Armaflex Ultima	UD-19-99/E	Sheet	
Armaflex Ultima	UD-25-99/E	Sheet	
+			
+			

- After defining the first Range of pipes diameters (100-125 mm) you can add the next Range of pipes by pressing the lower **(+)** button
- Define the minimum insulation thickness and add the Layers in the same way like you did for the first Range

Armacell plug-in Tool - Configuration

- After adding and defining layers of two pipe's ranges, the configuration window looks like this:

armacell
MAKING A DIFFERENCE AROUND THE WORLD

Configuration

Name: Cooling Water

System type: Hydronic Supply

System material: Copper - A

Minimum outer diameter(mm)	Maximum outer diameter(mm)	Minimum insulation Thickness(mm)
100	125	40

Layers

Material	Code	Insulation
Armaflex Ultima	UD-19-99/E	Sheet
Armaflex Ultima	UD-25-99/E	Sheet

Minimum outer diameter(mm)	Maximum outer diameter(mm)	Minimum insulation Thickness(mm)
126	150	55

Layers

Material	Code	Insulation
Armaflex Ultima	UD-25-99/E	Sheet
Armaflex Ultima	UD-32-99/E	Sheet

- You can delete with the button  the pipe ranges and the Layers

- You can edit and make corrections to your layer by pressing  button

- You can continue your work by adding next pipe range, by pressing  button

After all the settings have been made, save the configuration with the button at the bottom 

Armacell plug-in Tool - Configuration

- The configurator window now presents all defined sets for “Cooling Water”. In this case, only the insulation for copper A pipes OD from 100 mm do 150 mm in the *Hydronic Supply* system type will be added.

allows to switch off the configuration

allows to edit the configuration

allows to delete configuration

allows to save configuration

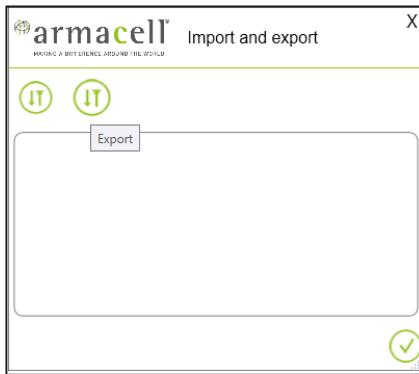

**allows to start the new configuration
(for the new system type , or new
pipe material)**

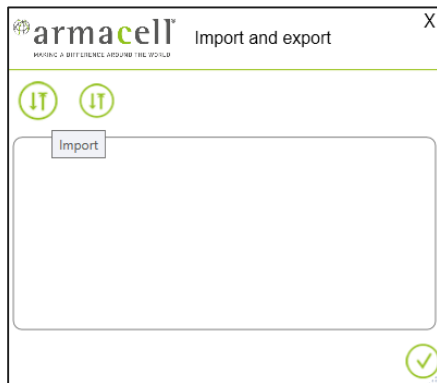

Armacell plug-in Tool - Configuration

- Import/Export button

- Select Export button and save your configuration under own name in your files.

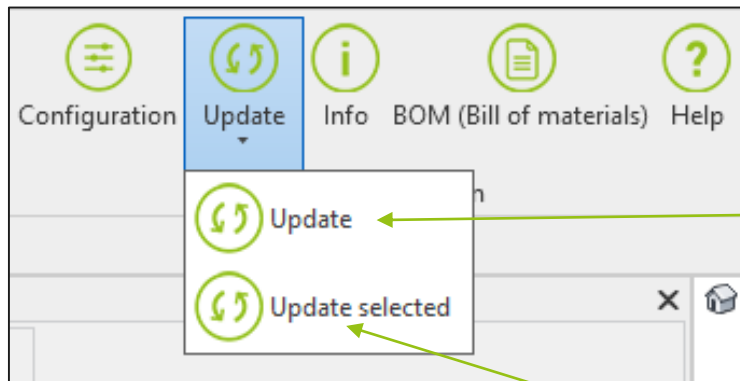

- Select Import button and open required configuration in your project.
- Now the configuration will work for this project.

Armacell plug-in Tool - Update

If you have project with designed pipe or ducts objects in a Revit without insulation and set your new Configuration, press *Update button* . 

All the pipes and ducts from your System type and with consistent material specified in the configuration will be automatically insulated.

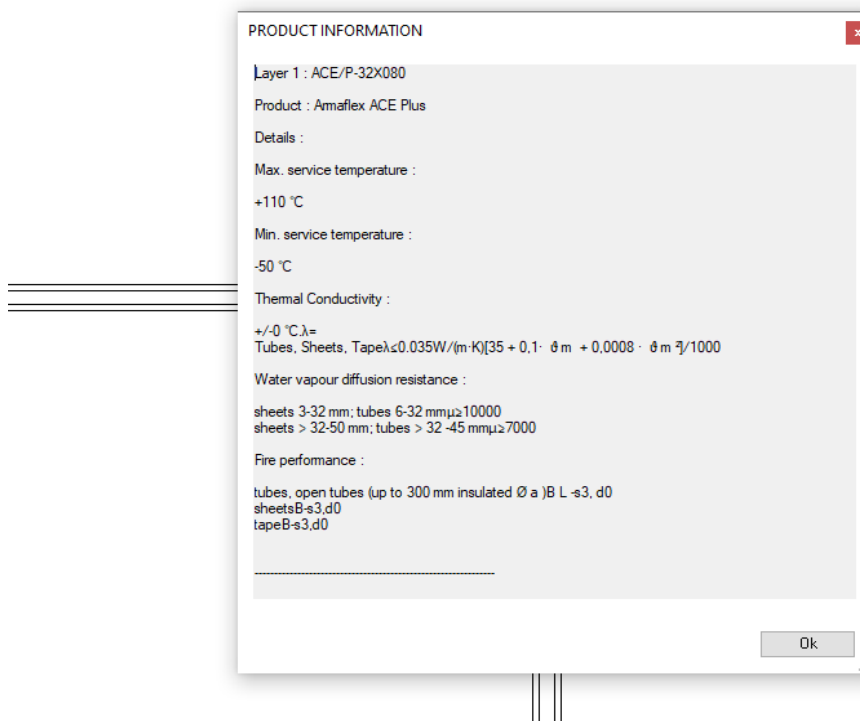

- If you made changes in your Configuration press top Update button. All the changes will be implemented to the project.
- You can choose the lower update button to make updates only to the selected objects

Armacell plug-in Tool - Info

You can display information about assigned insulations for the selected object.

Press button „info” and click on the selected insulated pipe or duct. You will see the window with information about the assigned Armacell’s insulation

Armacell plug-in Tool - BOM

You can display a bill of materials in the form of a table for pipes, pipe fittings, and ducts using  button. We have separate view for pipes, pipe fittings and ducts and ducts fittings.

The BOM list contains article number, product name and product parameters, product quantities: tubes in metres, sheets in m^2 . Specified material quantities also include material for layers used in multilayer insulation.

Material list for pipe insulation

Article	Details	Amount Tube(m)	Amount Sheet(m ²)
UD-19X042	Product : Armaflex Ultima	1,42	0
UD-32X089	Product : Armaflex Ultima	1,3	0
UD-09-99/E	Product : Armaflex Ultima	0	0,66

Material list for fittings insulation

Article	Details	Amount Tube(m)	Amount Sheet(m ²)
UD-19X042	Product : Armaflex Ultima	0,08	0

The table allows an export to Excel. The lists of pipes, ducts and fittings will be displayed separately in the respective Excell sheets.

Armacell plug-in Tool - Help

Using „Help” tool You can display information about plug-in version, you can update your version selecting the highlighted icon 

E-mail connection to Armacell Help desk
