

# SPECIALIST TRAINING III

## Cold pumps

---

The proper insulation of cold pumps and other complex equipment makes great demands on insulators. In this seminar tried-and-trusted solutions in terms of functionality and condensation control are presented for components that are difficult to insulate.

### Main topics

- Technical presentation on cold applications focusing on proper insulation of cold pumps
- Configuration of insulation on a cold pump
- Participants work alone to create and realize an insulation concept
- Insulation and adhesion analyzed by our application specialist

### Your benefit

Complex equipment will no longer present any problems for you! You will become familiar with new insulation concepts for technically demanding equipment and avoid the risk of complaints due to incorrect application. You will benefit from our applications specialist's valuable tips and learn from your fellow insulators!

### Requirement

Completion of Professional Training

### Seminar details

Duration:	1 day (09:00 to 15:00 h)
Category:	Specialist Training
Attendance fee:	no
No. of participants:	10 maximum
Qualification:	certificate upon successful completion
